Dear Sir

We sincerely thank you for expressing interest in collaborating with Archery Technocrats Private Limited (ATPL)

Archery Technocrats Private Limited (ATPL) is a leading automation company from South India, founded by professionals who are together having more than 35 + years of experience in the AIDC & IT Industry. ATPL is a leading Industrial Automation, IoT solutions, IT Infra, Tracking & Traceability solutions, software services provider. We at ATPL believe in providing best suited solutions to our clients, which should be cost effective and easy to implement. We at ATPL work on throughput to deliver the most effective solution.

We have expertise in WMS, WIP Automation, Supply Chain Management, RTLS and RFID Tracking solutions. Our strength and expertise are to study problem statement and with throughput propose solutions

ATPL Group is one of the technologically growing companies in automation solutions for industrial purpose. Every market sector sees in ATPL a technological partner of Honeywell, Nilfisk, Forbes, Axis and Raiser these are vertically integrated in order to cater to specific needs. Archery Technocrats is a controlled company of ATPL Group, specialized in industrial automation, Barcode, RFID and Wireless Solutions.

Thanking you and assuring you the best of our services always.

We kindly request you to review our commercial terms enclosed herewith and reach out to us with any clarifications you may require. It would be our honor to work with you, and we eagerly anticipate the opportunity to serve you.

We look forward to your valuable order on Archery Technocrats Private Limited.

Thanking You

For Archery Technocrats Private Limited

ARCHERY TECHNOCRATS®

T A R G E T P E R F E C T I O N

The proposed Perfect-WMS tailored for 3PL operations, designed to efficiently handle customer-driven inbound and outbound processes. The system will accept inward and outward schedules in Excel format from multiple customers, with the flexibility to adapt to varying header structures and data formats. A configurable data mapping engine will standardize these inputs, ensuring seamless processing without dependency on fixed templates.

It will provide end-to-end visibility of inventory movement, including inward tracking, batch/lot management, and outward traceability. With real-time dashboards, validation mechanisms, and exception handling, the system ensures operational transparency, improved accuracy, and optimized warehouse performance

Key Objectives

- To enable seamless processing of inward and outward schedules received in Excel format from multiple customers
- To handle different customer file formats through flexible data mapping without manual intervention
- To ensure accurate material receipt and dispatch based on customer instructions
- To maintain strict FIFO (First-In-First-Out) inventory management
- To provide complete visibility and real-time tracking of inventory movements
- To improve data accuracy, reduce manual errors, and enhance operational efficiency
- To ensure proper batch/lot tracking and end-to-end traceability

Core Functionalities

- Excel Upload & Flexible Data Mapping for multiple customer formats
- Inward Management with validation and GRN creation
- Real-time Inventory Management with location and batch/lot tracking
- FIFO-based automatic material allocation
- Outward Management with picking, packing, and dispatch tracking
- End-to-end Traceability of material movement
- Dashboard & Reports for real-time visibility
- Validation & Exception Handling for error control

Process Flow

ARCHERY TECHNOCRATS®

T A R G E T P E R F E C T I O N

- Receive inward/outward schedule in Excel from customer
- Upload file and map data into system format
- Process inward and create inventory records
- Store materials with location and batch details
- Update inventory with FIFO logic
- Process outward schedule based on instruction
- Pick materials using FIFO method
- Complete packing and dispatch

Business Value

- Improves operational efficiency by reducing manual effort and processing time
- Ensures accurate inventory management with real-time visibility
- Maintains strict FIFO compliance to reduce stock aging and losses
- Handles multiple customer Excel formats without dependency on standard templates
- Enhances customer satisfaction through faster and reliable inward and outward processing

Project Commercial Offer

Sl. No	Type	DESCRIPTION	UNIT PRICE	Qty	TOTAL
1	Software	Perfect-traceability- Web-Based Traceability Application	195,000	1	195,000
					195,000

Price Terms: All prices are exclusive of GST, which will be charged extra as applicable.

Technical Stack

- **Frontend:** React.js — For building a dynamic, single-page application with reusable UI components to present real-time production data and analytics.
- **Backend:** Node.js with Express — RESTful API server handling business logic, processing requests, and managing data flow.
- **Database:** Mongo DB — Relational database managing production records, scan events, and operational data.
- **Authentication:** JWT (JSON Web Tokens) — Secure authentication and session management.

Commercial Terms

- Payment Terms: 60% Advance | 30% Final Project demo | 10% After Implementation
- Training and Installation: Included
- Delivery Timeline: 2-months from PO & Advance Receipt
- Quotation Validity: 30 Days
- All data ownership remains with the client.
- Source code is proprietary to ATPL and protected under NDA.

Maintenance and Support

- One-month complimentary support from invoice date
- Renewable **AMC at 30%** of software value annually
- Support via email, phone, or remote session
- Chargeable basis onsite support
- Response time < 24 hours for critical issues

Out of Scope

- Third Party Application Integration after Deployment
- External System Integrations
- Scope Expansion

Implementation Strategy:

Development Approach:

- Follows agile development methodologies for iterative feature implementation and continuous improvement.
- Includes requirements gathering, design, implementation, and testing, deployment, and maintenance phases.
- Enables flexibility in adapting to changing business needs and user feedback during development cycles.

Testing and Validation:

- Conducts comprehensive testing phases, including unit testing, integration testing, and user acceptance testing (UAT).
- Identifies and resolves bugs early, ensures application reliability and user satisfaction.

User Training and Support:

- Provides user training sessions and documentation for application usage.
- Establishes a support system for troubleshooting, bug fixes, and updates post-deployment.
- Enhances user adoption rates and ensures smooth operation of the Barcode Label Printing Application.

Alchemist Movement Scope:

- Any OEM Licensed software needed for Application development need to take care.
- Finalization of hardware specifications and quantity for Readers and printing devices will be based on the respective usage environment.
- Networking, WIFI, Power supply, Mechanical Work & Accessories.
- Any cost related to Cloud service needed for Application deployment need to take care.
